CONTENTS OF VOLUME XIV.

CARL O. JOHNS: Researches on purines. On 2,8-dioxy-1,9-dimethylpurine and 2-oxy-6,9-dimethylpurine. VIII.......................... 1

VICTOR C. MYERS and MORRIS S. FINE: The creatine content of muscle under normal conditions. Its relation to the urinary creatinine.......................................................... 9

JACOB ROSENBOOM: A new method for drying tissues and fluids.................. 27

OTTO FOLIN and W. DENIS: Protein metabolism from the standpoint of blood and tissue analysis. VI. On uric acid, urea and total non-protein nitrogen in human blood........................................ 29

A. I. RINGER (with the assistance of L. Jonas): The chemistry of gluconeogenesis. II. The formation of glucose from valerianic and heptylic acids........................................ 43

H. STEENBOCK and E. B. HART: The influence of function on the lime requirements of animals........................................ 59

E. B. HART and H. STEENBOCK: The effect of a high magnesium intake on calcium retention by swine................................. 75

LAWRENCE J. HENDERSON and WALTER W. PALMER: On the extremes of variation of the concentration of ionized hydrogen in human urine.................................................. 81

ISIDOR GREENWALD: The estimation of creatinine and creatine in diabetic urines.................................................. 87

OTTO FOLIN and W. DENIS: On the colorimetric determination of uric acid in urine.................................................. 95

FRED C. KOCH: On the nature of the iodine-containing complex in thyreoglobulin............................................... 101

H. S. RAPER: Experiments bearing on the functions of the liver in the metabolism of fats. I........................................... 117

J. E. SWEET and A. I. RINGER: The influence of phlorhizin on dogs with Eck's fistula................................................. 135

J. H. AUSTIN and A. I. RINGER: The influence of phlorhizin on a splenectomized dog.................................................. 139

C. C.ERDMANN: A method for determining the surface tension of liquids for biological purposes................................... 141

P. A. LEVENE and G. M. MEYER: On the action of leucocytes on some hexoses and pentoses. III. Contribution to the mechanism of lactic acid formation from carbohydrates............. 149
Contents

H. D. Dakin and H. W. Dudley: An enzyme concerned with the formation of hydroxy acids from ketonic aldehydes ........................................ 155
Proceedings of the American Society of Biological Chemists vii
Lewis Knudson: Tannic acid fermentation. I ...................... 159
Lewis Knudson: Tannic acid fermentation. II. Effect of nutrition on the production of the enzyme tannase .......... 185
Lucius L. Van Slyke and Alfred W. Bosworth: Method of preparing ash-free casein and paracasein .................... 203
Alfred W. Bosworth and Lucius L. Van Slyke: Preparation and composition of basic calcium caseinate and paracaseinate . 207
Lucius L. Van Slyke and Alfred W. Bosworth: Preparation and composition of unsaturated or acid caseinates and paracaseinates ..................................................... 211
Lucius L. Van Slyke and Alfred W. Bosworth: Valency of molecules and molecular weights of casein and paracasein .......... 227
Lucius L. Van Slyke and Alfred W. Bosworth: Composition and properties of the brine-soluble compound in cheese .......... 231
T. Brailsford Robertson: On the rate of extraction of a protein (salmine) from desiccated tissue by an aqueous solvent ................. 237
Jacob Rosenbloom: A quantitative chemical analysis of human bile ............................................................... 241
Howard B. Lewis: The behavior of some hydantoin derivatives in metabolism. II. 2-Thiohydantoins .................. 245
P. A. Levine and C. J. West: On cerebro nic acid. II ..................... 257
Mathilde L. Koch: Contributions to the chemical differentiation of the central nervous system. I. A comparison of the brain of the albino rat at birth with that of the fetal pig .................. 267
W. Koch and M. L. Koch: Contributions to the chemical differentiation of the central nervous system. II. A comparison of two methods of preserving nerve tissue for subsequent chemical examination .................................................... 281
E. K. Marshall, Jr.: A rapid clinical method for the estimation of urea in urine .................................................... 283
Jacob Rosenbloom: The lipins of the heart muscle of the ox ............ 291
Joseph C. Bock: Note on Folin's microchemical method for the determination of urea ............................................................... 295
Carl O. Johns and Albert G. Hogan: Researches on purines. On 2-thio-6,8-dioxypurine and 2,8-dithio-6-oxypurine. On the desulphurization of thiopurines. On a new method of preparing xanthine. IX .................................................. 299
Treat B. Johnson and Lewis H. Chernoff: Researches on pyrimidines: pyrimidine-nucleosides .................................................... 307
H. D. Dakin: Studies on the intermediary metabolism of amino acids ............................................................... 321
Henry Leopold Holzberg: A new method of isolating trypsin .................. 335
H. D. Dakin, N. W. Janney and A. J. Wakeman: Studies on the conditions affecting the formation and excretion of formic acid. The estimation of formic acid in urine .................. 341
Contents

JACQUES LOEB and HARDOLPH WASTENEYS: The relative influence of weak and strong bases upon the rate of oxidations in the unfertilized egg of the sea urchin. ......................................................... 355

ISIDOR GREENWALD: Further metabolism experiments upon parathyroidectomized dogs .............................................. 363

ISIDOR GREENWALD: On the phosphorus content of the blood of normal and parathyroidectomized dogs ............................................. 369

CARL O. JOHNS and EMIL J. BAUMANN: Researches on purines. On 2-methylmercapto-6,8-dioxypurine and 2-methylmercapto-6-oxy-8-aminopurine. X .......................................................... 381

J. D. PILCHER: On the excretion of nitrogen subsequent to ligation of successive branches of the renal arteries ........................................ 389

FREDERIC FENGER: On the iodine and phosphorus contents, size and physiological activity of the fetal thyroid gland ........................................ 397

ALONZO ENGLEBERT TAYLOR and A. I. RINGER: The utilization of ammonia in the protein metabolism ........................................ 407

ALONZO ENGLEBERT TAYLOR and WILLIAM C. ROSE: Studies in the purine metabolism. I. On uricolyis in the human subject. 419

H. D. DAKIN and H. W. DUDLEY: On glyoxalase ........................................ 423

J. HOMER WOOLSEY: Studies in the blood relationship of animals as displayed in the composition of the serum proteins. II. A comparison of the sera of the ox, sheep, hog, goat, dog, cat and guinea pig with respect to their content of various proteins .......................................................... 433

OTTO FOLIN and W. DENIS: On the absorption of nitrogenous products—A reply to Abderhalden and Lampé........................................ 453

OTTO FOLIN and W. DENIS: On the tyrosine content of proteins—A reply to Abderhalden and Fuchs ........................................ 457

JACQUES LOEB and HARDOLPH WASTENEYS: The influence of bases upon the rate of oxidations in fertilized eggs ........................................ 459

A. P. MATHEWS: An important chemical difference between the eggs of the sea urchin and those of the star-fish ........................................ 465

JACQUES LOEB and HARDOLPH WASTENEYS: The influence of hypertonic solution upon the rate of oxidations in fertilized and unfertilized eggs ........................................ 469

THOMAS B. OSBORNE and CHARLES S. LEAVENWORTH: Do gliadin and zein yield lysine on hydrolysis? ........................................ 481

VICTOR C. MYERS and G. O. VOLOVIC: The influence of fever on the elimination of creatinine ........................................ 489

OTTO FOLIN and J. LUCIEN MORRIS: The normal protein metabolism of the rat ........................................ 509

JACQUES LOEB and HARDOLPH WASTENEYS: Is narcosis due to asphyxiation? ........................................ 517
Contents

A. I. RINGER, E. M. FRANKEL and L. JONAS: The chemistry of gluconeogenesis. III. The fate of isobutyric, isovalerianic and isocaproic acids in the diabetic organism, with consideration of the intermediary metabolism of leucine and valine............ 525

A. I. RINGER, E. M. FRANKEL and L. JONAS: The chemistry of gluconeogenesis. IV. The fate of succinic, malic and malonic acids in the diabetic organism, with consideration of the intermediary metabolism of aspartic and glutamic acids, proline, lysine, arginine and ornithine.......................... 539

P. A. LEVENE and G. M. MEYER: On the action of leucocytes on hexoses. IV. On the mechanism of lactic acid formation... 551

H. D. DAKIN and H. W. DUDLEY: A contribution to a theory concerning the intermediary metabolism of carbohydrates and proteins. The mutual interconversion of \( \alpha \)-amino-acids, \( \alpha \)-hydroxy-acids and \( \alpha \)-ketonic aldehydes........................................... 555

Index to Volume XIV.......................................................... 563
