Avanti now offers a new positively charged ceramide that readily accumulates in isolated and in situ mitochondria. Accumulated, positively charged ceramide increases inner membrane permeability and triggers release of mitochondrial cytochrome. With high solubility and bioavailability C₆-Pyr-Cer may lead to the development of new therapeutic strategies that target telomerase for the treatment of HNSCC.

D-erythro-2-N-[6'-{(1'pyridinium)-hexanoyl}-sphingosine bromide
Avanti Number 857450
