Fluorescent Sphingolipids - Only from Avanti®

Omega Labeled
Also in stock:
NBD Sphingosine

Fatty Acid Labeled
Also in stock:
C6 NBD & C12 NBD Ceramide
C6 NBD & C12 NBD Sphingomyelin
C6 NBD Glucosyl Ceramide
C6 NBD & C12 NBD Galactosyl Ceramide
C6 NBD & C12 NBD Lactosyl Ceramide
C6 NBD & C12 NBD L-threo-Sphingosine

Avanti Number 810207

NBD Sphingosine-1-Phosphate

Avanti Number 810223

All made with Avanti’s legendary purity

Phone 800-227-0651 (205-663-2494 International) or Email info@avantilipids.com

The Department of Biochemistry and Molecular Biology at the University of Kansas Medical Center invites applications for a tenure-track position at the rank of Associate or Full Professor. We are seeking individuals with an established research program that addresses the molecular mechanisms of cell signaling, development, and/or gene regulation. There are a number of interdisciplinary research centers at KUMC that have strengths in the areas of development and differentiation, kidney and bone disease, liver disease, maternal-fetal biology, reproductive biology, neurobiology, and cancer biology. It is anticipated that the successful candidate will establish collaborative, cross-departmental interactions with one of these research centers. The candidate will also be expected to participate in teaching graduate and/or medical students. State-of-the-art core facilities and new laboratory space are available.

To view the position description and apply on-line only go to http://jobs.kumc.edu and search for position J0020058. Please attach a curriculum vitae containing a summary of past research accomplishments, a statement of future objectives and the names of three references.

EO/AA Employer. Paid for by KUMC.
The metamorphosis continues! Introducing MetaMorph® 7 imaging software from Molecular Devices. Combining the most flexible and powerful tools for image acquisition, processing, and analysis, MetaMorph 7 offers a complete solution for even the most demanding live-cell imaging needs. New in MetaMorph 7:

- **4-D Viewer/3-D Measurements**: Visualize multi-dimensional data sets and obtain 3-D measurements
- **Application Modules**: Accelerate image analysis with biology-specific modules for automated cell segmentation and quantitation
- **Scan Slide**: Automatically acquire, tile and stitch images of large samples
- **Live Replay**: Capture real-time events, including a user-defined buffer interval prior to each event

Need to add hardware to the equation? Ask your local MetaMorph representative about our custom-integrated imaging workstations or visit www.metamorph.com for more information.

Expect more. We’ll do our very best to exceed your expectations.
