HIV-1 Tat protein promotes neuronal dysfunction through disruption of microRNAs.

J. Robert Chang, Ruma Mukerjee, Asen Bagashev, Luis Del Valle, Tinatin Chabrashvili, Brian J. Hawkins, Johnny J. He, and Bassel E. Sawaya

The complete microRNA array data were deposited on August 14, 2013 as required by the editorial policy of The Journal of Biological Chemistry. Because the mRNA and microRNA array data were not available for review before the article was published, they have not been evaluated for consistency with the published conclusions.
HIV-1 Tat protein promotes neuronal dysfunction through disruption of microRNAs.
