This article has been withdrawn by the authors. In this article, we reported that PPAR β/δ positively regulates myogenesis. After a thorough investigation by the Nanyang Technological University in Singapore, data falsifications have been found in some of the *in vitro* laboratory studies, which invalidate the results reported. Hence, the co-authors wish to withdraw this publication and offer our sincere apologies to all those investigators who may have been affected and misled by this.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.

Peroxisome proliferator-activated receptor β/δ induces myogenesis by modulating myostatin activity.
