Inhibitor of κB kinase ε (IKKe), STAT1, and IFIT2 proteins define novel innate immune effector pathway against West Nile virus infection.

Olivia Perwitasari, Hyelim Cho, Michael S. Diamond, and Michael Gale, Jr.

PAGE 44413:

The source of IFIT2−/− mouse embryo fibroblasts (MEFs) was inadvertently left out in the original manuscript. IFIT2−/− MEFs were generated by the laboratory of Dr. Ganes Sen (Cleveland Clinic) and were a gift to Dr. Michael Diamond.
