Azadirachtin interacts with the tumor necrosis factor (TNF) binding domain of its receptors and inhibits TNF-induced biological responses.

Maikho Thoh, Pankaj Kumar, Hampathalu A. Nagarajaram, and Sunil K. Manna

PAGES 5890 and 5891:

The first line of the legend to Fig. 1A should read as follows.

Azadirachtin inhibits TNF-induced NF-κB activation. The chemical structure of azadirachtin (A) (taken from Wikipedia) is shown.

Authors are urged to introduce these corrections into any reprints they distribute. Secondary (abstract) services are urged to carry notice of these corrections as prominently as they carried the original abstracts.
